
Journal

of the

Nottingham Astronomical Society

January 2018

In this issue

- Sky Notes for January
- Diary Dates 2018
- Meetings at Gotham and Plumtree
- Other events on the wider astronomical scene
- Deep-sky images captured by NAS members
- Social and Practical Astronomy – report of last month's meeting
- E-Services
- Society Information
- Membership application form

Thursday, January 4th

Gotham Memorial Hall
Gotham, NG11 0HE

8 pm (doors open at 7 pm)

Tonight we are holding an

Open Evening

A chance to meet new members,
peruse our library,
seek answers at our Help Desk,
and take part in our

NEW YEAR QUIZ

**We wish all Members of the NAS, and all who subscribe
to this Journal, a very happy and prosperous 2018.
May the stars shine for you!**

SOME ASTRONOMICAL ANNIVERSARIES IN 2018

20 years ago this year

The first module of the International Space Station was launched (20th November 1998)

30 years ago this year

The Soviet Union launched two probes to Mars, both of which failed to complete their missions (Phobos I launched July 7th, Phobos II launched July 12th 1988)

50 years ago this year

Apollo 8, the first manned spacecraft to venture beyond low Earth orbit, travelled around the Moon (Christmas Day 1968)

130 years ago this year

The 36-inch Lick refractor had its first light, and for 9 years was the largest telescope in the world (3rd January 1888)

Sky Notes

January 2018

Compiled by Roy Gretton

All times given below are in Universal Time (UT)

Earth will be at **perihelion** at 3:17am on January 3rd. The centre of the Earth will then be 147,100,176 km from the centre of the Sun, which is about 800 km closer than we were at perihelion in 2017.

PHASES OF THE MOON

<i>Phase</i>	<i>Date and time</i>
Full Moon	2:25am on January 2 nd
Last Quarter	10:26pm on the 8 th
New Moon	2:18am on the 17 th
First Quarter	10:22pm on the 24 th
Full Moon	1:28pm on the 31 st

...and by some people's reckoning, the second Full Moon in the month is designated a "Blue Moon".

This month the Moon is closest to the Earth on the 30th (following a previous perigee on January 1st), and furthest on the 15th.

(Strangely, the *BAA Handbook* states that **perigee** will be on the January 15th, which I reckon is incorrect, since December's perigee was on the 4th, and apsides move backwards by roughly three days each calendar month. I think the BAA has its apogees and perigees mixed up!)

THE PLANETS

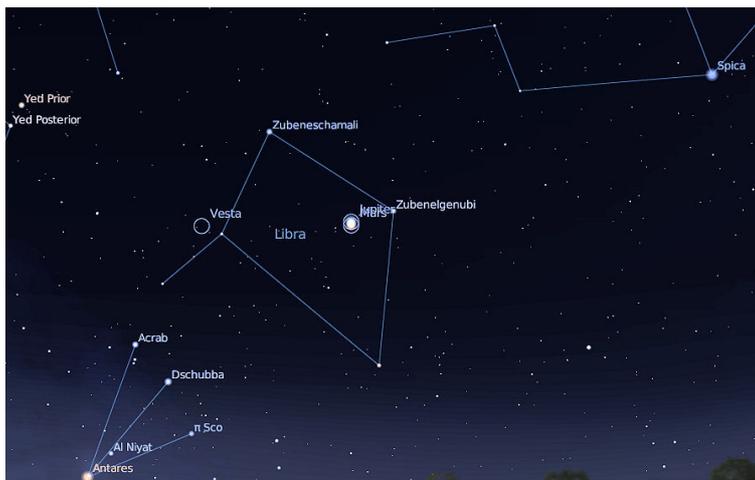

Mercury begins the year at greatest western elongation (23 degrees from the Sun), which means that the first week of January will be one of the best periods of the whole year to observe this planet in the morning sky. It will be low in the southeast before sunrise, shining at magnitude -0.3 and reaching an elevation of about 5 degrees by 7:15am. By the end of the second week of the month Mercury will be diving back into the solar glow as it heads toward superior conjunction in mid-February.

Venus must be regarded as unobservable in January, as it passes through superior conjunction on the 9th.

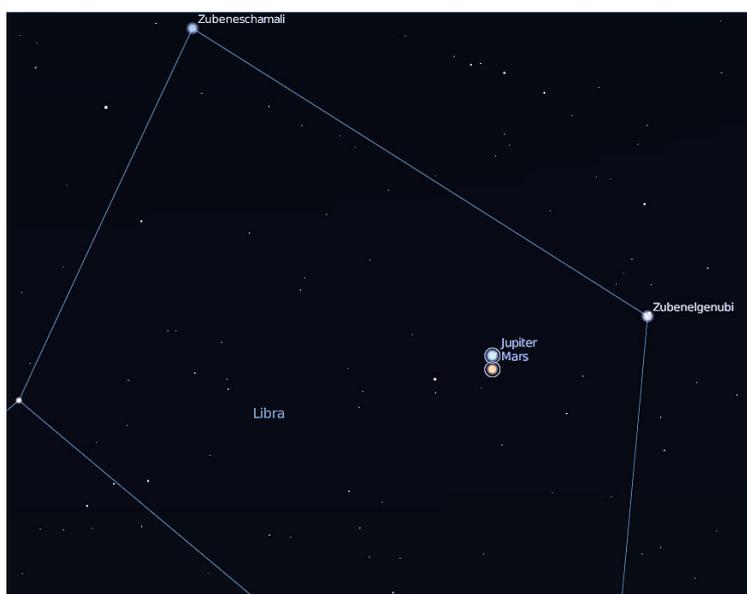

By mid-January the angular diameter of **Mars** begins to exceed 5 arcseconds for the first time for nearly a year, and so under favourable conditions hints of surface detail may become visible through moderate-sized amateur telescopes. The main disadvantage for UK observers is the fact that Mars is heading relentlessly southward, reaching -20 degrees declination by the end of the month; and it will not be until next October that Mars will again move north of -20 degrees. However, a noteworthy phenomenon occurs on January 7th, when Mars will pass one-fifth of a degree south of Jupiter (see below).

Jupiter continues to draw away from the Sun in the morning sky, and by the end of January will be rising more than 5 hours before sunrise. Throughout the month it will be about 16 degrees south of the celestial equator in the constellation of Libra, and shining at magnitude -1.9 , with an angular diameter beginning to exceed 35 arcseconds. At sunrise on January 7th, Jupiter and Mars will be approximately 0.2 of a degree apart, meaning that about an hour

before sunrise they will be visible in the same field of view through a moderate-power eyepiece. Jupiter, the more northerly of the pair, will be much the brighter of the two.

Looking SSE
at 6:30am on
January 7th

Close-up view of
Jupiter and Mars
at 6:30am on
January 7th

Saturn must be regarded as unobservable for UK observers as it is very close to the Sun, and well south of the celestial equator.

Uranus, about 10 degrees north of the celestial equator in the constellation of Pisces, is now an evening object, passing due south just before 7pm as the year begins, and remaining visible until 1 am. If you have never seen Uranus before, this month might be a good time to go looking for it. Through a telescope it appears as a pale greenish disk, a little over three arcseconds across.

Neptune is nearly 8 degrees south of the celestial equator in the constellation of Aquarius, and shining at magnitude 8. It is now well past its best for observation during the current apparition.

METEORS

Conditions are decidedly **unfavourable** for observing the **Quadrantids** this year, as they reach their maximum activity (perhaps 80 events per hour) on January 3rd, very close to the Full Moon. These meteors, which appear to radiate from a point in the north of the constellation of Boötes, not far from the handle of the Plough, can be as prolific as the better-known Perseids of August.

DIARY DATES 2018

Monthly Meetings of the Nottingham Astronomical Society

1) Meetings at Gotham Memorial Hall

Nottingham Road, Gotham, NG11 0HE

Held on the **FIRST Thursday** of each month except **August**

Doors open at 7pm for 8pm start.

These events are normally centred around a talk by a visiting speaker, except Opening Evenings, when NAS members provide the activities.

*Normally we have a **Library** and a **Helpdesk** open at each meeting.*

<u>Date</u>	<u>Topic</u>	<u>Speaker</u>
January 4 th	Open Evening with a New Year Quiz	
February 1 st	Triumphs of Voyager – Part 2 <i>Where no probe has gone before</i>	Paul Money FRAS, FBIS
March 1 st	Dark Future? <i>Can the UK's dark spaces survive?</i>	Bob Mizon, MBE, FRAS <i>BAA Commission for Dark Skies</i>
April 5 th	Jodrell Bank 60 years on	Prof Ian Morison <i>University of Manchester</i>
May 3 rd	Lucky Planet – why Earth is exceptional <i>and what it means for life</i>	Prof David Waltham <i>Royal Holloway, University of London</i>
June 7 th	Diamonds in the Sky <i>White Dwarfs in Modern Astrophysics</i>	Professor Martin Barstow <i>University of Leicester</i>
July 5 th	Cassini's Final Science	Dr Phil Sutton <i>University of Lincoln</i>
August 4 th (Saturday)	Annual Society BBQ at the Observatory	
September 6 th	The Adventures of Curiosity on Mars	Prof Sanjeev Gupta <i>Imperial College, London</i>
October 4 th	Juno – the Answers	Prof Emma Bunce <i>University of Leicester</i>
November 1 st	Annual General Meeting	
December 6 th	Transient Events in Astronomy or <i>things that go bump in the night</i>	Prof Dame Jocelyn Bell Burnell DBE, FRS, FRSE, FRAS

2) Social and Practical Astronomy Meetings at the Burnside Memorial Hall, Plumtree

Church Hill, Plumtree, Nottingham, NG12 5ND

Held on the **THIRD Thursday** of each month from **7:30pm**

These meetings are of a more informal nature, providing opportunity for members and guests to share their hobby over a cup of tea or coffee, as well as listening to a short talk.

The next meeting will be on January 18th

**Check our website: www.nottinghamastro.org.uk
for the latest information about the Society's meetings
and for further information about the talks and speakers**

Events in the coming months open to everyone
(follow hyperlinks for more information and how to book)

20th January	BAA Ordinary Meeting , London
27th January	SPA Quarterly Meeting , London
30th January	Project Adrift , Open Dome Event, Clifton
17th February	Soc History of Astronomy Research Workshop , Birmingham
28th February	A brief history of women in astronomy , Open Dome Event, Clifton
4th March	BAA Deep Sky Section Meeting , Bedford
10th March	BAA Back to Basics Workshop , Bristol
21st April	Society for the History of Astronomy Spring Meeting , Cambridge

Editor's Note: *What you are about to see on the following three pages are some glorious astronomical images captured by members of the Society in recent weeks.*

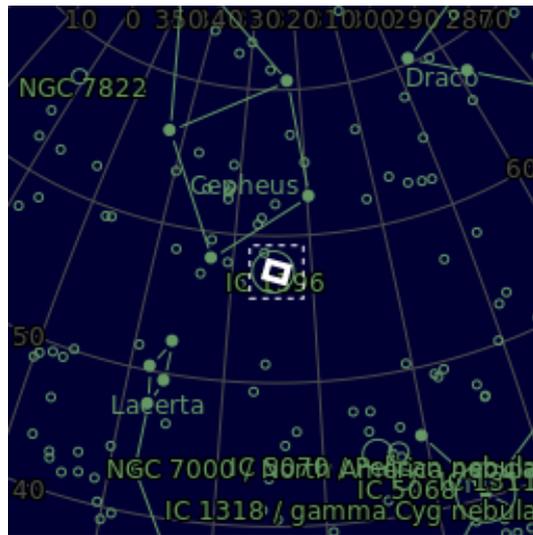

If any members have astronomical images they would like to share in this Journal, I would be delighted to receive them. Don't worry if they don't match the standard and quality of these samples; they only have to represent your enjoyment of astro-imaging.

DEEP-SKY IMAGES CAPTURED RECENTLY BY NAS MEMBERS

IC 1396 – The Elephant’s Trunk Nebula in Cepheus (Leigh Blake)

Captured at the end of November, this image was acquired with my SkyWatcher ED80 and an Atik 460ex mono CCD. The image consists of 5 hours of 30 min exposures using a Hydrogen Alpha narrowband filter.

Where to find the Elephant's Trunk Nebula

IC 405 – Flaming Star Nebula in Auriga (Leigh Blake)

This image was acquired over 2 nights mid-December, the first collecting 4.5 hours of narrowband Hydrogen Alpha exposures, the second collecting an hour each of red, green and blue filtered light with the mono camera. These were then combined to produce the image below.

Where to find the Flaming Star Nebula

The following software was used to capture and process the images:

Image collection and equipment control -

Sequence Generator Pro - <http://www.mainsequencesoftware.com/>

Image Stacking -

Deep Sky Stacker - <http://deepskystacker.free.fr/english/index.html>

Image processing

Pixinsight - <https://pixinsight.com/>

THE PLEIADES (Gareth Davies)

Captured on 11th December 2017 using a Canon 700D camera at the prime focus of a Skywatcher 80ED. The total exposure time was 3 hours, made up of 5-minute sub-frames at ISO 800.

Social and Practical Astronomy, Plumtree

The **December** meeting at Plumtree was a festive social event, consisting of mulled wine and warm mince pies; let's not mention the overcooked sausage rolls. A quiz saw the group divided up into teams, and despite the remonstrations about the number of chemistry-related questions, the teams all did very well. The winning team consisted of Roy Gretton, Chris Sneddon and Graham Shepherd - well done.

The quiz can be found here if you want to have a go: <https://goo.gl/5tPZeI>

Once you've done the quiz, the answers can be found here: <https://goo.gl/12vMfC>

ORDINARY COMMITTEE MEMBERS

David Buxton

Chris Sneddon

Meetings

Our formal meetings, often with an illustrated talk by a guest speaker, are held on the first Thursday of each month (except in August) at:

**Gotham Memorial Hall
Gotham
Nottingham NG11 0HE**

Doors open 7.00pm
Meetings start 8.00pm
Meetings end 10.00pm

These meetings are open to the public, and visitors are welcome to attend.

Annual subscriptions 2018

Full	£30
Joint rate for partners living at the same address	£45
Under-18s and full-time students	£5

Subscriptions become due on 1st January. Half-price subscription is charged if joining after 30th June (minimum subscription £5).

Please make cheques payable to:
Nottingham Astronomical Society.

If you would like more information about the **Nottingham Astronomical Society**, or would like to become a member, please contact the Secretary secretary@nottinghamastro.org.uk or speak to any NAS committee member at one of the regular monthly meetings. A membership application form is inside this issue of the Journal.
